Work Experience

Canalyst

Co-op Software Developer

Vancouver, BC

Sept. 2017 - Dec. 2017

- Developed a VSTO add-in for Excel in C#, providing tools and shortcuts to aid with building financial models.
- Created a tool in C# to compare updates to models, improving accuracy and speed by 120%.
- Implemented a variety of QA checks to find common mistakes in models, reducing errors and saving time.
- Wrote ad-hoc macros in C# to make changes to and check for errors on database of 3600+ financial models.
- Configured team projects to automatically build, test and deploy updates using Docker containers and GitLab CI/CD.

TD Securities

Co-op Sales & Trading Associate

Toronto, ON

Dec. 2016 - Apr. 2017

- Rebuilt and redesigned existing tools to automatically generate legal and marketing materials for TD Equity-linked Notes using Excel and VBA, increasing speed by 80% and reducing errors by 50%.
- Expanded report-generating server using SQL and JavaScript, improving analytics on sales and client holdings.
- Provided historical testing of Note performance to Sales Team to aid with client pitches.

Scotiabank

Co-op Associate

Toronto, ON

Jan. 2016 - Apr. 2016

- Designed and developed database application to perform quarterly Enterprise Stress Tests, used by Scotiabank to perform Stress Tests on retail and wholesale credit portfolios in Q2 2016.
- Assisted with the modeling and projection of default rates of Scotiabank's domestic retail credit portfolios.

Projects

Rubberduck: Open Source Contributor to Rubberduck, an extension to the Visual Basic Editor (VBE). Implemented features in C# to modernize the VBE, such as a unit-testing framework, static code analysis and quick-fixes for potential code issues.

Translink Bot: Implemented a Facebook Messenger bot using Node.js to provide real-time transit arrival information for the Vancouver public transit system.

Time the Market: Built a game in Python, using matplotlib and pandas, to test player's ability to outperform the market.

Monopoly: Created a University of Waterloo-based Monopoly game in C++, using OOP principles and design patterns.

Languages & Technologies

Proficient with Python, C++, C#, SQL, VBA, Bash, \LaTeX , Git, GitLab CI/CD

Familiar with C, MATLAB, JavaScript, Linux

Exploring Java, HTML, CSS, Docker, Heroku, AWS

Interests & Extracurriculars

Interests: Toronto Raptors, APBRmetrics, Chess and Poker

Extracurriculars: University of Waterloo Orientation-Week Leader, Vice-President of the Double Degree Club
